

## LEGACY DATA REMEDIATION REPRESENTATIVE EXPERIENCE

Listed below are representative Legacy Data Remediation efforts Redgrave Attorneys and Analysts have undertaken:

- Provided advice and counsel regarding defensible methodology to implement automatic information management and deletion processes on electronic repositories including file shares and SharePoint for a Fortune Global 250 consumer products and services company
- Assisted with the remediation of unmanaged electronic information repositories, and developed and implemented a practical and legally defensible remediation methodology that assessed the eligibility of legacy material (including hard copy materials, microfiche and electronic material) for destruction against legal holds for a Global 500 food services company
- Assessed the risks and benefits associated with using analytics tools to identify and manage electronically stored information in accordance with corporate records retention schedules and legal holds for a leading developer and manufacturer of medical diagnostic products, imaging systems and surgical products
- Developed and implemented a practical and legally-defensible remediation methodology assessing eligibility of unmanaged legacy hard copy and backup materials for destruction against legal holds and the company records retention schedule for a fortune Global 100 technology company
- Provided advice and counsel regarding legal risks of remediation methodology for a global aerospace company
- Developed and implemented a sampling process of legacy backup media tapes for a division of a Global 500 company, resulting in the legally defensible destruction of approximately 80% (48,000 of 60,000) of their legacy media
- Assisted a Global 500 company investigating newer direct-tape indexing technologies that would enable a legally defensible sampling process with tighter cost controls
